

To Whom It May Concern:

16 May 2005

Regarding the removal of the reserve static line (RSL) from Javelin and Javelin Odyssey sport skydiving harness/container systems, the position of Sun Path Products, Inc is as follows:

Our harness/container systems and all related accessories and components are tested in accordance with SAE 8015 Rev. B. During our most current TSO testing, evaluation and approval the Javelin and Javelin Odyssey harness/container system incorporates the reserve static line as part of the complete system and permanent removal of this part is highly discouraged and NOT recommended. Our reserve static line is built with a snap shackle for easy disconnect from the main (wearers) left riser, if the user wishes to not use the option.

Sincerely,

Dave Singer
